| What are SQL Server filegroups and datafiles.                                          | 7 |
| What are SQL Server Transactional logs and database recovery models                     | 7 |
What is the difference between a SQL Server instance and database

Client-Server Communication in SQL Server 2016

How to create database objects using SQL Server 2016 Management Studio

Create two sample databases (“AdventureWorks” databases) for practice in the training.

How to create tables and indexes using the SQL Server Management Studio (SSMS)

How to manage indexes using SSMS including rebuilding indexes to reduce fragmentation.

How to create primary key foreign key relationships between tables using SSMS

How to add new file groups in SQL Server using SSMS

Microsoft SQL Server 2016 Security

What are instance-level principals and database-level principals?

Understand SQL Server fixed server roles.

How to create a new database user and map it with an instance login.

What are SQL Server database schemas and learn about their association with database users.

Under database role memberships and how to grant permissions to database users.

What is SQL Server Configuration Manager and how to change the ownership of a SQL Server database instance.

How to enable login auditing in SQL Server 2016

Microsoft SQL Server 2016 database session administration

Understand the differences between database connections and sessions.

Learn about the details of various dynamic management views (DMVs) for monitoring database activity.

How to kill (terminate) an SQL Server session id using SSMS.

How to identify and run built-in reports in SSMS.

Learn about the auto-commit, implicit and explicit transactions in SQL Server.

SQL Server 2016 Backup and Recovery – Part 1

Introduction to Backup and Recovery strategy for databases.

How to detach and attach databases in offline mode.

How to copy databases using the Copy Database Wizard (CDW).

Full Database backups using the SIMPLE Recovery Model.

Full Database and Transactional log backups with FULL Recovery Model.

Differential database backups with FULL Recovery Model.
How to view and maintain database backup history information. .................................................. 9
How to create maintenance plans for automating backups in SQL Server. .................................. 9
How to create maintenance plans for purging old backups. ....................................................... 9
Learn about the SQL Server Agent for scheduling backups.................................................... 9
SQL Server 2016 Backup and Recovery – Part 2 ....................................................................... 9
How to perform a full database restore and recovery. ............................................................... 9
How to recover from SQL Server transactional logs................................................................. 9
How to recover a database using time based recovery option (STOPAT). .................................. 9
How to use the checksum and compression options in backup operations.................................. 9
Applying service packs and performing database upgrades ...................................................... 9
How to apply SQL Server 2012 Service Pack 3 (SP3) to SQL Server 2012 RTM version................ 9
How to upgrade databases from SQL Server 2012 SP3 to SQL Server 2016 RTM. .................... 9
SQL Server 2016 Data Export and Import (Data Movement) .................................................... 9
Partial Data export and import using the command line tools – BCP command ....................... 9
Partial Data export and import using GUI tools – Export and Import Wizard............................ 9
SQL Server 2016 Performance Tuning ....................................................................................... 10
Understanding database indexes............................................................................................... 10
Checking index fragmentation and maintaining them............................................................... 10
Understanding and maintaining SQL Server Database statistics............................................. 10
Understanding SQL Server Profiler .......................................................................................... 10
How to create SQL Server traces. ............................................................................................. 10
How to run server-side traces..................................................................................................... 10
SQL Server 2016 Backup to URL (Microsoft Cloud) ................................................................. 10
Create an account in Windows Azure....................................................................................... 10
Create a storage account and containers within the Windows Azure account........................ 10

Overview

Database Administrators (DBAs) are responsible for the design, implementation, support and maintenance of computerized databases in today’s organizations. The role also includes architecting, building and scaling databases for future data growth and capacity. They are also responsible for security, performance and availability of data to users and customers.

All the above tasks are performed with the help of a Database Management System (DBMS) and the leading and most widely used DBMS across the world today are the Oracle, Microsoft SQL Server, MySQL database etc.

DBAs play an important and responsible role in every company’s Information Technology (IT) department. DBAs are also very well paid, and the average annual salary is more than $100,000 in the USA.

Furthermore, it is projected that the demand for DBAs will grow at the rate of 20% per year until 2022. www.cnn.com also published an article recently that Database Administrators are in the TOP TEN in-demand jobs for the next decade.

The leading technology job portal in the United States – www.dice.com often reports in its monthly job reports that DBAs are in the “Most Difficult to Fill” (due to shortage of qualified DBAs) IT job.

About DBA University, Inc.

DBA University, Inc. is a professionally run organization based in Chicago, USA specializing in training and services in computer database administration and development. We are currently offering training courses in SQL Server DBA, Oracle DBA, Oracle SQL PL/SQL and Java Programming using expert instructors and excellent REMOTE LAB access through affordable prices.

We are very dedicated and committed towards the success of our students. Our courses are very hands-on and aimed at job placement and preparing our students to face the real world with self-confidence and expert level technical skills.

Most of our courses are taught online and hence students all over the world are welcome to register for our courses. Registration for our upcoming courses can be done at http://www.DBAuniversity.com
About Srini Ramineni – MS SQL Server DBA Trainer and Founder of DBA University

The MS SQL Server DBA training is provided by Srini Ramineni (Srini). Srini’s video is at http://video.dbauniversity.com/2dH69/dba-university-remote-dba-services/

Srini Ramineni is also the founder of DBA University and a well experienced IT Professional with rich work experience and knowledge in both MS SQL Server DBA and Oracle DBA.

He provides training in an interactive method with lots of LAB practice work in his classes. All the courses he teaches are bundled with lot of hands-on practice, challenging tests and above all, he makes his students fall in love with Database Administration. He can be reached at srini@dbauniversity.com
Srini is a "results oriented" training provider with the dual aim of providing a world class training experience and helping our students secure a well-paying and stable job as a Database Administrator.
Pricing and Registration

The course fee is $499 (all-inclusive price). We provide cloud-based access to our video recordings for 12 months of on demand access 24*7 and it also comes with our cloud lab access for 6 months (with an option to extend the lab access duration to 1 year during checkout.)

Even though it is an on-demand course based on video recordings, it still provides you a real classroom like experience because the videos are developed using a White Board. This is a very detail-oriented database administration course which has 450 pages of lab practical exercises for each student.

Please purchase online at https://dbauniversity.com/course/sql_server_dba_training/ We accept online DEBIT CARD, CREDIT CARD or PayPal.

a) 21 video recordings.
b) Access for 12 months on a 24*7 basis.
c) Each video is about 1.5 hours approximately.
d) Remote Desktop Connection for 6 months. (with an option to extend the access time to 1 year)
e) Training material through Dropbox email download.
f) The tuition fee is $499 (all-inclusive price).

Cloud Lab Access

- We provide the REMOTE IP address to the student to get access to our cloud server.
- Students can connect from their Windows or MAC computer using the Remote Desktop Connection program.
- We provide Microsoft Windows Server 2012 R2 as the operating system.
- Students can practice both MS SQL Server 2016 version and MS SQL Server 2012 version.

Course Topics

Introduction to database management systems and databases
What are a database and a database management system (DBMS?)

Introduction to Microsoft SQL Server and its overall SQL Server Data Platform

History and Current trends of DBMS and Database Administration

Tasks of a Database Administrator

**Microsoft SQL Server 2016 Installation**

What are the editions of Microsoft SQL Server 2016 Data Platform?

Learn the hardware and software pre-requisites for a successful SQL Server 2016 installation.

Understanding SQL Server 2016 components.

Perform an successful initial installation of Microsoft SQL Server 2016 .

Understanding SQL Server version identifiers, installed directories and conventions.

Add features to an existing SQL Server 2016 installation including Analysis Services and Reporting Services.

Install Microsoft SQL Server 2016 Management Studio.

**Microsoft SQL Server 2016 Architecture**

Understanding SQL Server system databases and business (non-system) databases.

Understanding the SQL Server database structure.

What are SQL Server filegroups and datafiles.

What are SQL Server Transactional logs and database recovery models.

What is the difference between a SQL Server instance and database.

Client-Server Communication in SQL Server 2016.
How to create database objects using SQL Server 2016 Management Studio

Create two sample databases (“AdventureWorks” databases) for practice in the training.

How to create tables and indexes using the SQL Server Management Studio (SSMS).

How to manage indexes using SSMS including rebuilding indexes to reduce fragmentation.

How to create primary key foreign key relationships between tables using SSMS.

How to add new file groups in SQL Server using SSMS.

Microsoft SQL Server 2016 Security

What are instance-level principals and database-level principals?

Understand SQL Server fixed server roles.

How to create a new database user and map it with an instance login.

What are SQL Server database schemas and learn about their association with database users.

Under database role memberships and how to grant permissions to database users.

What is SQL Server Configuration Manager and how to change the ownership of a SQL Server database instance.

How to enable login auditing in SQL Server 2016.

Microsoft SQL Server 2016 database session administration

Understand the differences between database connections and sessions.

Learn about the details of various dynamic management views (DMVs) for monitoring database activity.

How to kill (terminate) an SQL Server session id using SSMS.

How to identify and run built-in reports in SSMS.

Learn about the auto-commit, implicit and explicit transactions in SQL Server.

SQL Server 2016 Backup and Recovery – Part 1
Introduction to Backup and Recovery strategy for databases.

How to detach and attach databases in offline mode.

How to copy databases using the Copy Database Wizard (CDW).

Full Database backups using the SIMPLE Recovery Model.

Full Database and Transactional log backups with FULL Recovery Model.

Differential database backups with FULL Recovery Model.

How to view and maintain database backup history information.

How to create maintenance plans for automating backups in SQL Server.

How to create maintenance plans for purging old backups.

Learn about the SQL Server Agent for scheduling backups.

**SQL Server 2016 Backup and Recovery – Part 2**

How to perform a full database restore and recovery.

How to recover from SQL Server transactional logs.

How to recover a database using time based recovery option (STOPAT).

How to use the checksum and compression options in backup operations.

**Applying service packs and performing database upgrades**

How to apply SQL Server 2012 Service Pack 3 (SP3) to SQL Server 2012 RTM version.

How to upgrade databases from SQL Server 2012 SP3 to SQL Server 2016 RTM.

**SQL Server 2016 Data Export and Import (Data Movement)**

Partial Data export and import using the command line tools – BCP command

Partial Data export and import using GUI tools – Export and Import Wizard
SQL Server 2016 Performance Tuning

Understanding database indexes.
Checking index fragmentation and maintaining them.
Understanding and maintaining SQL Server Database statistics
Understanding SQL Server Profiler
How to create SQL Server traces.
How to run server-side traces

SQL Server 2016 Backup to URL (Microsoft Cloud)
Create an account in Windows Azure.
Create a storage account and containers within the Windows Azure account.
Create SQL Server credentials for authenticating to the Windows Azure URL.
Perform a full database backup to URL.
Delete the database and restore it from the URL.

Unique Teaching Methodology

We use a DIGITAL WHITE BOARD for teaching our online courses. Teaching with a DIGITAL WHITE BOARD gives our students a traditional classroom like experience. The instructor writes and draws by free hand on the DIGITAL WHITE BOARD and all our students can see it in real time in the online classroom. All the lectures are taught in this way. Also, in most of the classes, students are given some time to perform the lab work by connecting to the remote lab server along with the lecture at the same time. This will help students to get hands-on on the same day with the same topic.
